OBJECTIVE

Software Engineer with 2+ years of experience in full-stack web development, seeking full-time opportunities to build innovative, scalable software solutions. .

EDUCATION

Bachelor of Science in Software Engineering, International Islamic University Islamabad 2018 – 2022

SKILLS

Frontend	React.js, JavaScript, Tailwind CSS
Backend	Node.js, SQL Server, Shopify App Development, .NET Core
Tools	Swagger, Postman, Prisma, Supabase, Chart.js, Git

EXPERIENCE

Software and Web Developer Sep 2022 – Present
Red Apes Sweden

- Designed, developed, and maintained scalable web applications, APIs, and chatbots using React.js, Node.js, SQL Server, and .NET Core.
- Created and integrated Shopify apps using Remix, GraphQL API, and AI-powered features to enhance e-commerce functionality.
- Built secure, role-based access control systems and optimized database queries for high performance.
- Developed APIs and bots for Microsoft Teams with OAuth 2.0 authentication and analytics dashboards.

PROJECTS

BokaEnkelt Booking System. Built a room reservation system using React.js with drag-and-drop booking, calendar integration, and JWT-based role access control. Developed backend with .NET Core APIs and SQL Server, ensuring optimized performance and scalability. Enabled admins to manage users and rooms, while users could create, edit, or view reservations.

Mobile App APIs. Designed APIs for mobile applications to replicate booking system functionalities, ensuring seamless synchronization, API version control, and thorough documentation via Swagger. Tested extensively with Postman for reliability.

Microsoft Teams Bot. Created a bot to display inspection analytics with role-specific views for admins and managers. Implemented secure OAuth 2.0 authentication and generated daily, weekly, and monthly reports.

Shopify App (Remix). Developed a Shopify app to display product quantities on storefronts with customizable admin-set messages based on stock levels. Integrated Shopify GraphQL API for product data retrieval and used metakeyfields for settings storage.

Shopify Price Match App. Built a Shopify app with a theme extension for price match requests. Integrated AI-powered competitor price comparison and automated approval logic, developed admin dashboard for request management, and implemented automatic discount application at checkout with email notifications.

Doctor Appointment Booking System (MERN Stack). Developed a full-stack platform for patients, doctors, and admins enabling online scheduling, profile management, and secure payments via Stripe. Created role-specific dashboards, JWT-based authentication, and optimized MongoDB queries for performance.

Kintrol Fleet Management System. Built a fleet management system using React, TypeScript, Tailwind CSS, and Supabase. Developed real-time dashboards with Chart.js, QR code scanning, Excel export features, and secure authentication. Improved operational efficiency and compliance tracking through digital transformation.
